

**AMENDMENTS TO THE CLAIMS**

1-3. (Cancelled)

4. (Currently Amended) A glove comprising elastomeric material wherein said glove has an inner skin-contacting surface and an outer surface comprised of said elastomeric material, wherein said elastomeric material comprises a polymer selected from the group consisting of natural rubber latex, synthetic polyisoprene, nitrile, and blends thereof, [[and]] wherein said outer surface is coated with a composition comprising a mixture of silicone, ammonium salts of alkyl phosphates, and cetyl pyridinium chloride, and wherein the glove has a reduced coefficient of friction compared to the same glove without said outer surface coating composition.

5. (Original) A glove according to claim 4, wherein the glove is powder free.

6. (Previously Presented) A glove according to claim 5, wherein the elastomeric material is a natural rubber latex.

7. (Previously Presented) A glove according to claim 5, wherein the elastomeric material is polyisoprene.

8. (Previously Presented) A glove according to claim 5, wherein the elastomeric material is nitrile.

**RESPONSE UNDER 37 C.F.R. § 1.116**

**EXPEDITE PROCEDURE**

Application Number: 10/666,650

Attorney Docket Number: 029714-00101

9. (Previously Presented) A glove according to claim 5, wherein the elastomeric material is a blend of two or more polymers selected from the group consisting of natural rubber latex, synthetic polyisoprene, and nitrile.
10. (Original) A glove according to claim 4, wherein the silicone comprises polydimethylsiloxane.
11. (Cancelled)
12. (Cancelled)
13. (Previously Presented) A glove according to claim 4, wherein said coated outer surface of the glove has a coefficient of friction less than about 0.4.
14. (Previously Presented) A glove according to claim 4, wherein the glove has reduced stickiness when compared to the same glove without said outer coating composition.
15. (Previously Presented) A glove according to claim 4, wherein the glove has improved double-donnability as measured by the coefficient of friction when compared to the same glove without said outer surface coating composition.

16-41. (Cancelled)

42. (Previously Presented) A glove comprising elastomeric material wherein said glove has an inner skin-contacting surface and an outer surface comprised of said elastomeric material, wherein said elastomeric material comprises a polymer selected from the group consisting of natural rubber latex, synthetic polyisoprene, nitrile, and blends thereof, and wherein said outer surface is coated with a composition consisting essentially of a mixture of silicone, ammonium salts of alkyl phosphates, and cetyl pyridinium chloride.

43. (New) A glove according to claim 42, wherein the glove is powder free.

44. (New) A glove according to claim 43, wherein the elastomeric material is a natural rubber latex.

45. (New) A glove according to claim 43, wherein the elastomeric material is polyisoprene.

46. (New) A glove according to claim 43, wherein the elastomeric material is nitrile.

47. (New) A glove according to claim 43, wherein the elastomeric material is a blend of two or more polymers selected from the group consisting of natural rubber latex, synthetic polyisoprene, and nitrile.

48. (New) A glove according to claim 42, wherein the silicone comprises polydimethylsiloxane.

49. (New) A glove according to claim 42, wherein the glove has a reduced coefficient of friction compared to the same glove without said outer surface coating composition.

50. (New) A glove according to claim 42, wherein said coated outer surface of the glove has a coefficient of friction less than about 0.4.

51. (New) A glove according to claim 42, wherein the glove has reduced stickiness when compared to the same glove without said outer coating composition.
